

To Whom It May Concern,

Power Factor Correction Equipment was installed at the Rampmaster manufacturing facility in late April 2009. We are pleased to report that the results for the first year equate to a savings of a 17% reduction for the total facility electrical costs, based on our production level of units delivered.

Based on our investment of \$9,238.00, this equipment gave us a breakeven point of 13 months. All future savings have become net profit. These results exceeded our expectations and were substantially more than what was originally projected and guaranteed by Global Energy Solutions.

Woody and Pete have acted in a very professional manner. They continue to follow up and provide assistance as required in this and other energy savings related areas that can help our company.

Obviously we are very pleased and would recommend their products and services to other clients.

Sincerely,

A handwritten signature in blue ink, appearing to read "Robert Watkins". The signature is fluid and cursive, with a long horizontal stroke extending to the right.

Robert Watkins, CEO & Chairman
